# About Hindi

## Disconnected

requires two or more letters to be combined together to form a *character*

क(k) + ई(i) = की(ki)

# About Hindi

## Disconnected

requires two or more letters to be combined together to form a *character*

$$\text{क(k)} + \text{ई(i)} = \text{की(ki)}$$

## Complex

53 base letters – 34 consonants, 11 vowels and 8 diacritic marks

ओ ो	 1	एँ 2	@ 3	# 4	\$ 5	% 6	श 7	^ 8	त्र 9	& 0	स 1	श्र 2	( 3	) 4	- 5	+ 6	BS

# Research Objective

Develop and evaluate three different types of Hindi phrase sets

**Films**

**Textbooks**

**Translated MacKenzie and Soukoreff's Phrases**

to study effects of their characteristics on performance

---

# Evaluating the Effect of Phrase Set in Hindi Text Entry

*Mohit Jain*  
IBM Research India

---

# Phrases from Films (FP)

# Phrases from Films (FP)

Process

Randomly selected from  
online forums and blogs

Benefit

Very familiar

Example

डान को पकड़ पाना मुश्किल  
ही नहीं नामुमकिन है  
(*to catch Don is not only  
hard but impossible*)

# Phrases from Textbooks (TP)

## Process

Randomly selected from  
Grade VII Hindi textbook

## Benefit

Topical relationship between  
consecutive phrases

## Example

दिव्या अनिल कि छोटी बहन है  
(*Divya is Anil's younger sister*)

---

# Translated MacKenzie & Soukoreff's Phrase Set (MSP)

**Process** Translated the phrase set into Hindi using context-appropriate words

```
please follow the guidelines  
an airport is a very busy place  
mystery of the lost lagoon  
is there any indication of this  
are you sure you want this  
the fourth edition was better
```

**Benefits** Standard  
Used extensively for evaluation

**Example** प्यार के कई मतलब हैं  
(*love means many things*)

# Linguistic Analysis

Metrics	EMILLE/C IIL Corpus	FP	TP	MSP	MS English Set
Number of phrases/sentences	737528	60	50	150	500
Number of words	12295677	490	673	881	2712
Number of unique words	202042	267	382	464	1163
Minimum word length	2	2	2	2	1
Maximum word length	33	10	13	14	13
Min. phrase length (# words)	1	4	3	3	3
Max. phrase length (# words)	888	14	39	11	9
Min. phrase length (# letters)	1	16	10	12	16
Max. phrase length (# letters)	4752	58	167	49	43
Single-letter correlation	-	0.97	0.98	0.98	0.95
Word-based correlation	-	0.70	0.68	0.75	0.85
Readability	m=10.34 sd=6.76	m=5.36 sd=2.4	m=8.0 sd=3.82	m=5.68 sd=2.46	m=4.17 sd=3.88
Words per phrase	m=16.67 sd=13.27	m=8.16 sd=2.4	m=13.46 sd=7.45	m=5.87 sd=1.6	m=5.4 sd=1.1
Letters per phrase	m=83.34 sd=67.4	m=35.45 sd=10.15	m=61.44 sd=34.63	m=26.82 sd=7.08	m=28.61 sd=5.02
Letters per word	m=4.06 sd=2.16	m=3.46 sd=1.44	m=3.63 sd=1.65	m=3.73 sd=1.72	m=4.46 sd=2.4

# Linguistic Analysis

Metrics	MS English Set	EMILLE Hindi Corpus	FP	TP	MSP
Single-letter correlation	0.95	-	0.97	0.98	0.98
Word-based correlation	0.85	-	<b>0.70</b>	<b>0.68</b>	<b>0.75</b>
Readability	4.17	10.34	<b>5.36</b>	<b>8.0</b>	<b>5.68</b>
Words per phrase	5.4	16.67	<b>8.16</b>	<b>13.46</b>	<b>5.87</b>

---

# Hypothesis

**H1** Use of MSP and FP will result in faster text entry and a lower error rate than TP

**Reason** MSP and FP have lower readability and lower words per phrase

---

# Hypothesis

**H1** Use of MSP and FP will result in faster text entry and a lower error rate than TP

**Reason** MSP and FP have lower readability, higher word correlation, and lower words per phrase

**H2** MSP will be preferred over FP and TP

**Reason** MSP's high word-based correlation to the corpus

---

# Demographics

18 participants (12 males, 4 females, mean age=21.8)

**Criteria:** Must know how to read, write, and speak in Hindi, but have never used an Inscript (Indian Script) keyboard before

All undergraduate Computer Science students (average 10.16 years with QWERTY)

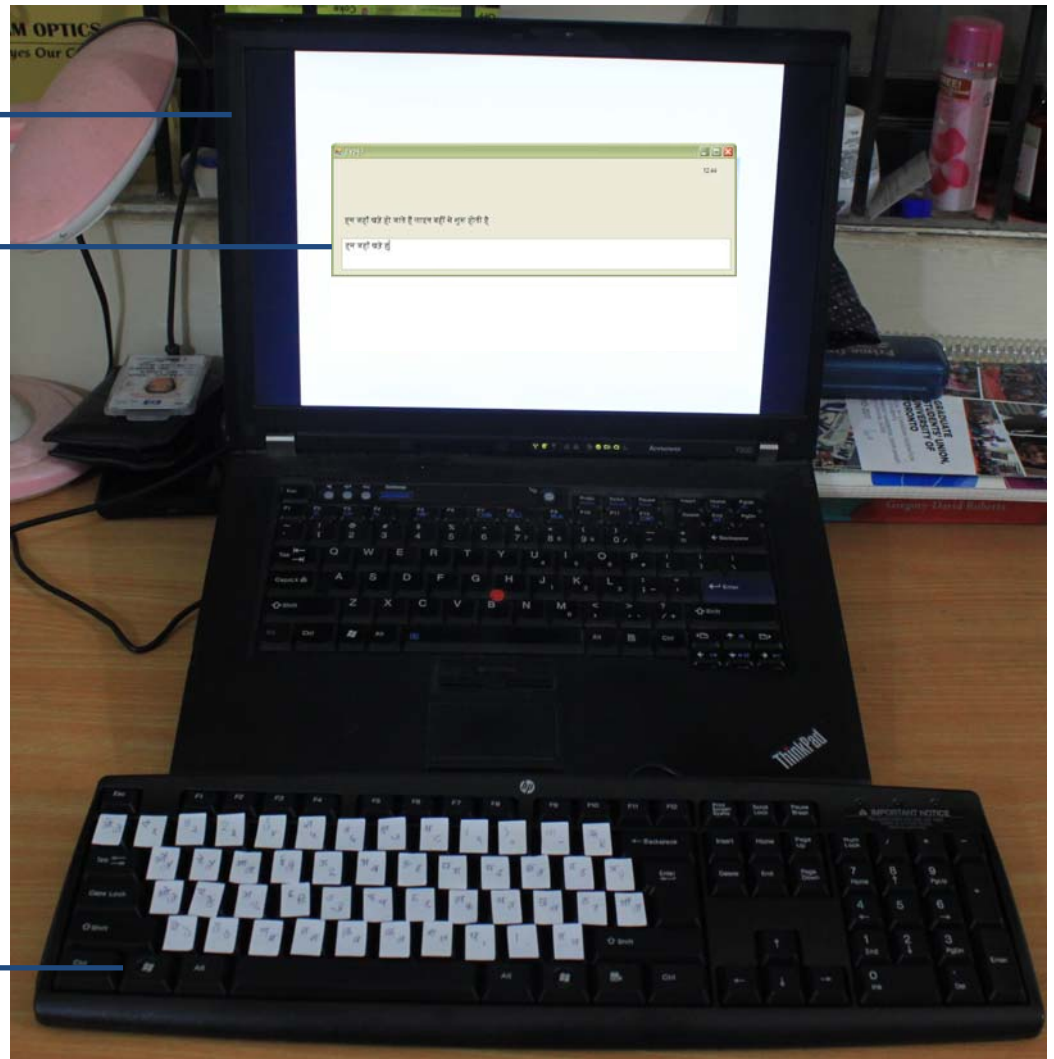

Paid Rs 100 (~\$2) per session; Prize money of Rs 1000 and Rs 500 for the two fastest

# Apparatus

15.4 inches laptop screen ←

Custom software in C# ←  
(test phrase at the top of  
the screen and participant  
typing the same phrase  
into a text box below it)

Inscript keyboard ←

---

# Procedure

Within-subject three 45-min session study

A session consisted of two 20-minute typing blocks with a break of 3-5 minutes between the blocks

Asked to enter text as quickly and as accurately as possible

Ordering of the phrase sets was counterbalanced

After each session, participants were required to rate the phrase set in terms of memorability, understandability, phrase length, and frequency of usage on a 5-point Likert scale

---

# Results: Speed

**Words per minute (wpm):** (letters per second)\*60/5,  
with the definition that a word consists of 5 letters

---

# Results: Accuracy

**Keystrokes per Letter (KSPL):** Number of keystrokes required to input a letter in Hindi

**Minimum String Distance (MSD):** between the presented and transcribed phrase

KSPL measures the corrected errors as every correction adds multiple keystrokes, while MSD accounts for the uncorrected errors in the final transcribed text

**Note:** For Hindi, ideal KSPL for Inscript keyboard is 1.12

# Results: Speed & Accuracy

	FP	TP	MSP	H1
<b>Speed (wpm)</b>	m=6.22 sd=2.16	m=7.28 sd=2.62	m=7.22 sd=2.48	$F_{2,34}=2.5$ <b>p=0.1</b>
<b>Accuracy (KSPL)</b>	m=1.41 sd=0.13	m=1.40 sd=0.1	m=1.43 sd=0.22	$F_{2,34}=1.3$ <b>p=0.3</b>
<b>Accuracy (MSD)</b>	m=0.028 sd=0.01	m=0.046 sd=0.03	m=0.03 sd=0.01	$F_{2,34}=2.4$ <b>p=0.1</b>

---

# Results: Questionnaire

Participant preferred MSP

(because it was short, easy to understand  
and memorable phrases)

Friedman  $\chi^2(2)=14.7, p<0.01$  (**H2**)

---

# Results: Questionnaire

**Understandability** FP (m=4.6, sd=0.8) > TP (m=3.1, sd=0.9)  $p < 0.0001$   
MSP (m=4.17, sd=1) > TP  $p = 0.01$

**Length** Phrases from TP were too long, whereas phrases from FP were just right, thus ~8 words per phrase seems acceptable

**Memorability** *“Phrases should be interesting, so that we enjoy typing.”* – FP  
FP (m=4.2, sd=0.2) > TP (m=2.5, sd=0.1)  $p < 0.0001$   
MSP (m=3.9, sd=0.2) > TP  $p < 0.0001$

---

# Limitations & Future Work

Limited demography (only undergraduate students)

**Study w/ wider demography; demography-based phrases?**

Only three sessions long study

**Longitudinal study is needed to show that there is perhaps no significant difference between any sets of phrases**

Only studied on one type of keyboard

**Results might differ for other input method**

---

# Conclusion

Three phrase sets – FP, TP and MSP, with different linguistics characteristics

No performance difference, but MSP most preferable

Readability, memorability and phrase length should be considered

**In future, use our phrase sets for more consistency across studies, to produce generalizable results**

---
